

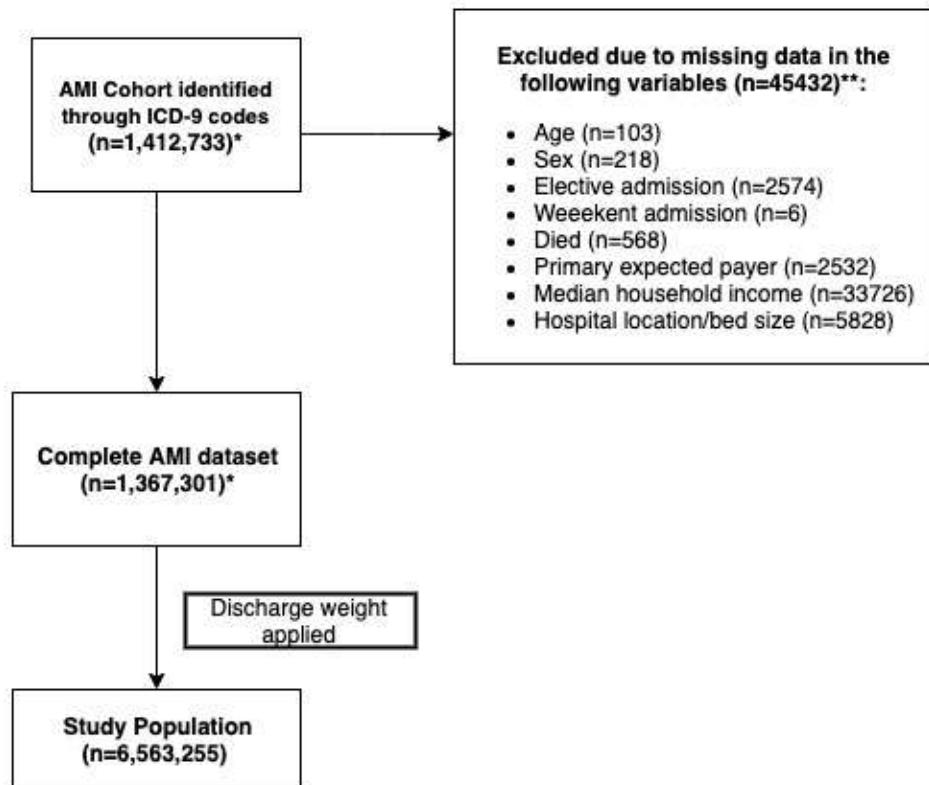

Figure 1. Flow diagram of study population selection

\* Number of unweighted records

\*\*Data was missing for more than one variable in some exclusions

AMI: acute myocardial infarction

Figure 2: Changes in number of records with either a current or historical cancer diagnosis over time.

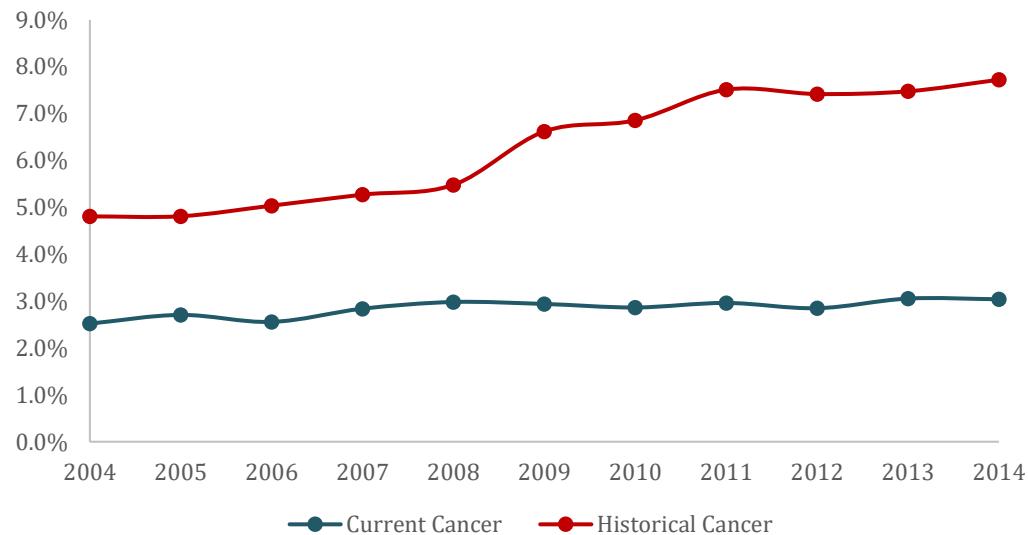

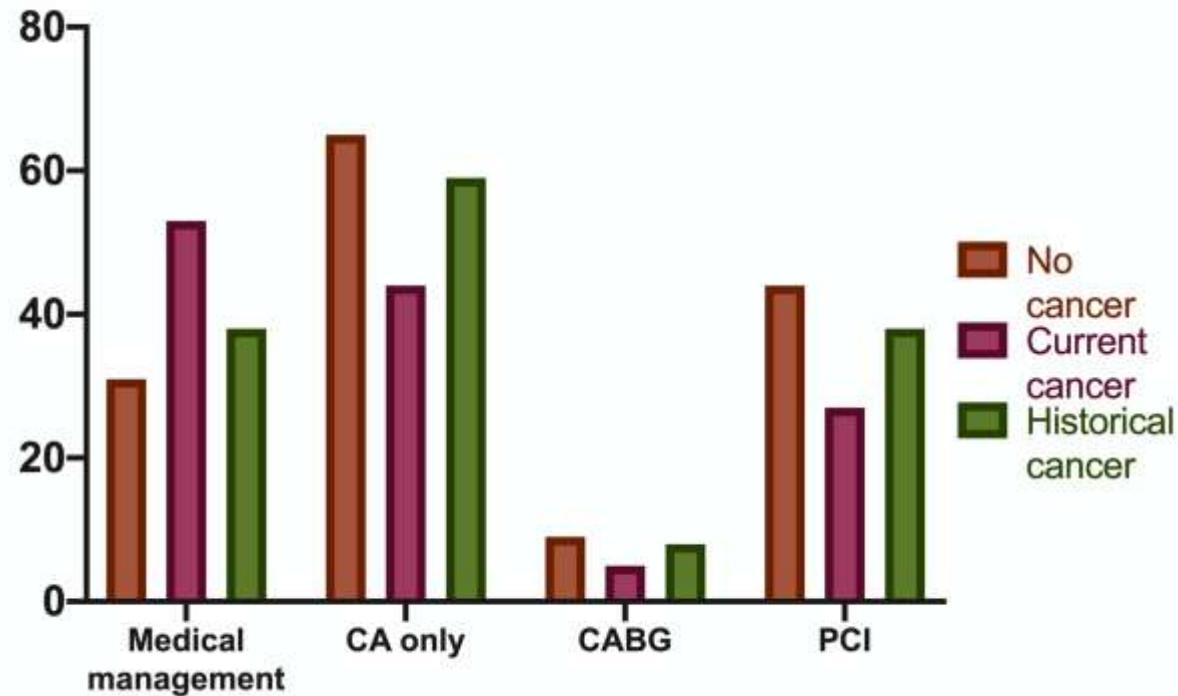

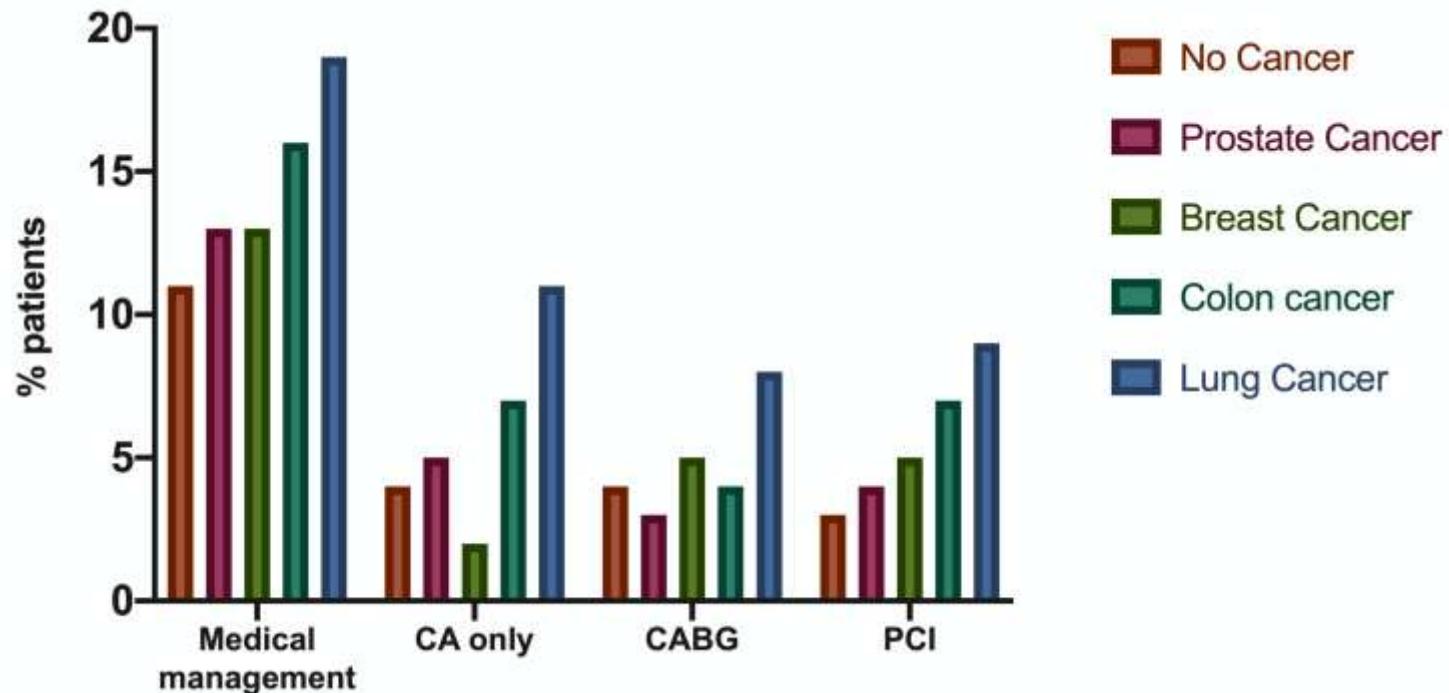

Figure 3: Distribution of treatments among current, historical and no cancer diagnoses

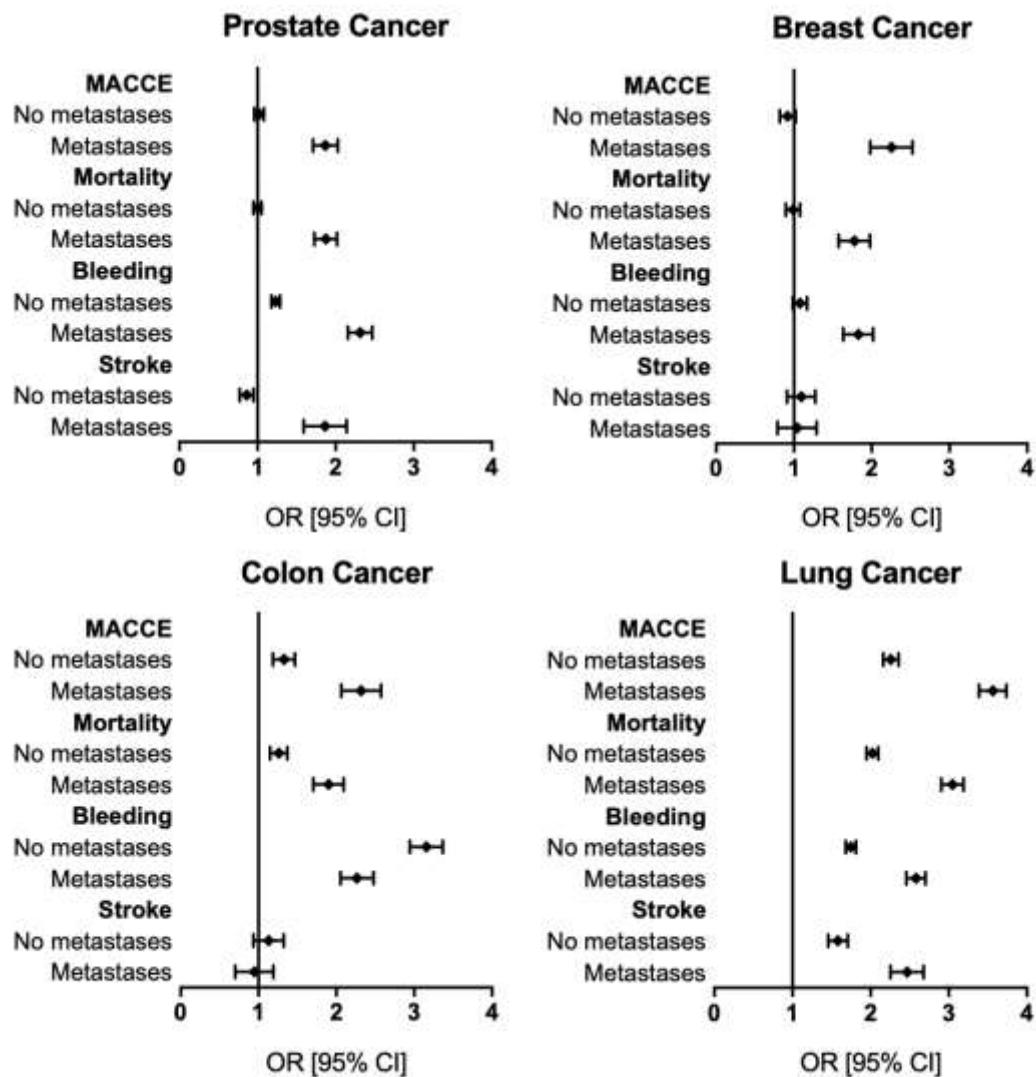

CABG: coronary artery bypass grafting; PCI: percutaneous coronary intervention

Figure 4: Crude mortality for patients with a current diagnosis of the 4 considered cancers stratified by treatment received

\*No CABG cases; CABG: coronary artery bypass grafting; PCI: percutaneous coronary intervention

Figure 5: Adjusted odds ratios for adverse events according to cancer type and presence of metastases.

**MACCE:** composite of all-cause mortality, cardiac complications and stroke
