1 **Abstract:** Drawing on long term ethnographic research in the SE Peruvian Amazon this
2 article asks what kinds and forms of learning do indigenous women value, how are the
3 knowledge and skills they value changing over time and what is the nature of their agency in
4 the face of the discrimination and prejudice that permeate their lives. Harakmbut women's
5 lives have been transformed over the past 40 years in the wake of neoliberal globalisation,
6 rapacious exploitative economic practices and unregulated illegal gold mining. Within this
7 context three types of learning emerge as important: learning about indigenous cosmology
8 and way of life; experiential learning through engagement with an expanding capitalist
9 society; and learning through training and capacity building for participation, voice and
10 rights-based advocacy. The article argues that all three types of learning give meaning to
11 Harakmbut women's lives, their relationship to their history and their views of the world.
12
13
14
15

16 **Key words:** Intergenerational, knowledge, gold-mining, cosmology, indigenous women,
17 agency.

Introduction

1
2
3
4
5 As the Introduction to this Special Issue discusses, indigenous women have suffered and
6
7 continue to suffer from discriminatory stereotypes. Generic social indicators of health, wealth
8
9 and education show indigenous women as lagging behind in relation to global and Latin
10
11 American regional norms, while formal assessments of learning suggest that indigenous
12
13 peoples consistently obtain the lowest results in learning achievement over the past ten years
14
15 (UNESCO/OREALC 2017). Literacy rates in Latin America for indigenous women are less
16
17 than half of those of non-indigenous women (Vinding and Kampbel 2012) while in terms of
18
19 schooling and formal education indigenous people are counted among the most marginalised
20
21 and discriminated against groups (UNESCO 2014). Such indicators feed into dominant
22
23 discourses of indigenous women as under-educated, as victims of poverty and as vulnerable
24
25 and disempowered. These discourses promote homogenising stereotypes about who
26
27 indigenous women are, their educational performance and expectations for what education
28
29 can do for them.
30
31
32
33
34

35
36
37
38
39 Taking a historical approach, this article looks at the lives of indigenous Harakmbut women
40
41 living in the SE Peruvian Amazon to question this recognition of indigenous women as
42
43 under-educated, poor, vulnerable and disempowered. It asks, on the contrary, what kinds and
44
45 forms of learning do indigenous women themselves value, how are the knowledge and skills
46
47 they value changing over time and what is the nature of their agency in the face of the
48
49 discrimination and prejudice that permeate their lives. Harakmbut women's lives have been
50
51 transformed over the past 40 years in the wake of neoliberal globalisation, rapacious
52
53 exploitative economic practices and unregulated and illegal gold mining that have led to the
54
55 loss of their indigenous territory and its biodiversity.
56

63
64
65

1
2
3 Drawing on my research with the Harakmbut people of the community of San Jose de Karene
4
5 over a period of 40 years, the article looks at the life of one woman, Tambetⁱ, and her
6
7 daughters, investigating the learning she values and has valued at different periods over her
8
9 adult life and through periods of radical social, economic and environmental change. It
10
11 focuses on three types of learning: a) learning and developing knowledge, skills and
12
13 understandings of Harakmbut way of life, relationships to territory, spirituality and view of
14
15 the world (cosmovision); b) knowledge, skills and understandings acquired through
16
17 experiential learning in an expanding capitalist society; and c) learning through training and
18
19 capacity building for indigenous participation, voice and rights-based advocacy. For each
20
21 type I ask, what aims do Harakmbut women have for their learning, what recognition do they
22
23 seek, what new knowledge and skills do they value, and what kind of action are they taking
24
25 with the knowledge and skills they have developed?
26
27
28
29
30
31
32
33
34
35

36 These questions and the interpretative approach I take emerge from ongoing ethnographic
37
38 research with the Harakmbut people and broad concerns with questions of social justice,
39
40 indigenous rights and gender equality (see for example May and Sleeter 2010, Tikly and
41
42 Barrett 2013). It asks about indigenous women's own values and agency, drawing on human
43
44 development theory and education (see Unterhalter 2007) and is influenced by post-colonial
45
46 and post-structural analysis in relation to understanding the nature of inequalities and
47
48 recognition which indigenous peoples experience (see Blaser 2004, de la Cadena 2010). As
49
50 Radcliffe (2015) notes there are not some definable or essentialised qualities of being an
51
52 indigenous woman but 'their uniqueness arises from the interplay in interlocking hierarchies'
53
54 (p.29) and historical marginalisation. In this way the article provides insights into indigenous
55
56
57
58
59

61
62
63
64
65

1 Harakmbut women's learning in relation to the unique positions they occupy culturally,
2 socially and historically as indigenous Harakmbut women, not as a generalised category of
3 'indigenous woman' (Fennell and Arnot 2008).ⁱⁱ There is an extensive and diverse literature
4 on indigenous education and the education of and by indigenous peoples, (see for example:
5 Battiste 2008, Bellier and Hays 2016, Lopez and Sichra 2016, Minde 2008) which discusses
6 indigenous knowledge and indigenous education in relation to formal, non-formal and
7 informal education. In this article the focus is on learning, where learning is 'an activity of
8 obtaining knowledge' (<https://dictionary.cambridge.org/dictionary/english/education>
9 [accessed 20.12.18]) rather than formalised education and the process of teaching and
10 learning.

26
27

28 Based on ethnographic research carried out between 1980 and the present day in the
29 community of San Jose de Karene, the article explores the changes in Harakmbut women's
30 lives over this period, viewing culture and indigeneity as dynamic concepts, rather than static
31 and descriptive (Postero 2013). Specifically, I draw on fieldwork experiences and
32 relationships developed as a participant observer over two periods of 20 months living in the
33 community of San Jose in the 1980s and 1990s and annual and biannual periods of fieldwork
34 of shorter duration over twenty years. The narrative of Tambet and her daughters has
35 developed from ongoing analysis over this period, drawing on field note books kept while
36 living and gardening, fishing, gathering in the forest and gold panning with Tambet, her
37 daughters and sisters. It also draws on previously published and more detailed and expansive
38 writing on the lives of the Harakmbut of San Jose de Karene (see Aikman 1999a, b, c, 2001,
39 2012, 2017). Research was carried out in both Harakmbut and Spanish languages.

1 Fieldwork in the Harakmbut community was complemented by participation in meetings,
2 conversations and congresses of the Federation of Natives of Madre de Dios. (FENAMAD),
3
4 semi-structured interviews and conversations with representatives of the Interethnic
5
6 Association for the Development of the Peruvian Amazon (AIDSESEP), through the collection
7
8 of minutes, reports and other unpublished material and through my attendance at meetings of
9
10 the UN Working Group on the drafting of the Declaration of the Rights of Indigenous
11
12 Peoples in Geneva. Sections discussing Harakmbut cosmology, kinship and politics draw on
13
14 three volumes by Gray (1996,1997a, 1997b). Since the early 1980s I have been an active
15
16 supporter of indigenous rights and the development of FENAMAD as a critically engaged
17
18 anthropologist (Low and Merry 2010).
19
20
21

27

28 When I first met Tambet in late 1979 she had experienced the decimation of her kin and clan
29
30 from disease, flight and relocation, marriage and childbirth. Since then she has lived through
31
32 dramatic rapid socio-cultural change and destructive environmental change from gold
33
34 mining, timber extraction, and a plethora of exploitative economic relations, engendering a
35
36 shift from the hunting/fishing small scale agricultural livelihood she pursued with her
37
38 husband, children and extended family, to living today on the margins of an environmental
39
40 wasteland created by massive in-migration of impoverished, landless and marginalised
41
42 Peruvians turned gold pannersⁱⁱⁱ.
43

49
50

51 As a broad context within which to locate the discussion of indigenous Harakmbut women,
52
53 the first section briefly considers Latin America and Peruvian attitudes, policies and practices
54
55 towards indigenous peoples and education. Three subsequent sections investigate the specific
56
57 experiences of Tambet and the Harakmbut with the three types of learning. The first follows
58
59
60
61
62
63
64
65

1 Tabet's early life to investigate Harkambut learning, knowledge and the importance of
2 territory and the invisible spirit world. The second considers the changes taking place in the
3 community of San Jose de Karene and examines new knowledge, skills and understandings
4 acquired by Tabet and her daughters through their experiences as part of an expanding
5 capitalist and intercultural society, dominated by gold mining. The third looks at the ways in
6 which Harkambut women's activism has emerged and the value attached to training and
7 capacity building for furthering their goals of recognition, participation and self-
8 determination as indigenous women. The final discussion section considers the ways these
9 types of learning interrelate, their interdependence and their meaningfulness in the context of
10 social and environmental change and generational shift.

32
33
34
35
36
37 While the experiences of Tabet and her daughters are unique to them, they emerge in the
38 wider context of conditions shared with other indigenous peoples. In Latin America and the
39 Caribbean region the indigenous population, that is the population which traces its ancestry
40 before the arrival of Europeans, is estimated to be around 36.6 million, some 7 percent of the
41 total population, amounting to 600 indigenous peoples living in diverse social and economic
42 situations. Bolivia, Guatemala, Mexico and Peru have the largest indigenous populations,
43 comprising around 80 percent of the regional total (World Bank cited in UNESCO/OREALC
44 2017, World Bank 2015). However, as Morrison and Vaiolenti (2011) highlight, definitions of
45 indigeneity for statistical census purposes tend to rely on whether or not individuals speak an

1 indigenous language ignoring socio-cultural-political aspects of being indigenous and self-
2 definitions of indigeneity, which may or may not include language.
3
4
5
6
7

8
9 The ILO Convention 169, of which 15 Latin America and Caribbean countries are
10 signatories, states that indigenous peoples are
11
12

13
14 ‘peoples in independent countries who are regarded as indigenous on account of their
15
16 descent from the populations which inhabited the country, or a geographical region to
17
18 which the country belongs, at the time of conquest of colonization or the
19
20 establishment of the present state boundaries and who irrespective of their legal
21
22 status, retain some or all of their own social, economic, cultural or political
23
24 institutions’ (ILO convention 169, Article 1.1b).
25
26
27
28

29
30
31 With the European conquest of the Americas, the concept of race emerged for the first time
32
33 as the term ‘European’ no longer identified a population in a continent (Europe), but was
34
35 used to discriminate between coloniser and colonised. While the terms by which the non-
36
37 European populations have been labelled may have changed over time (e.g. savage, Indian,
38
39 *campesino*, native), they all denote ‘otherness’. Similarly, the term indigenous has come to be
40
41 used to identify those peoples perceived as being different from the dominant population of
42
43 European descent and from subsequent migrant groups (Quijano in del Aguila 2016, p.5).
44
45
46
47
48
49
50

51
52 The indigenous population of Peru is estimated to be around 4 million, which represents
53
54 14.76 percent of the population of which 94 percent are Andean and 6 percent Amazonian
55
56 (Defensoria del Pueblo 2011). The indigenous population of the Andes have a different
57
58 history of recognition to that of the Amazon where many indigenous peoples have remained
59
60
61
62
63
64
65

1
2 in relative autonomy well into the 20th century (del Aguila 2016). In the 1940 Peruvian
3 census, the Amazonian Departments of Peru only gave a rough estimate of the ‘jungle’
4
5 population, meaning that for the most part the diverse socio-cultural-linguistic indigenous
6
7 population was invisible in the statistics. The Harakmbut are numerically small, with a
8
9 population that decreased from around 10,000 at the beginning of the 20th century to some
10
11 1,000 individuals (Gray 1996). Until the beginning of the boom in gold mining in the 1980s
12
13 the Harakmbut in the socially and economically marginalised Madre de Dios region of the
14
15 South Eastern Amazon had been invisible to the state.
16
17
18
19
20
21
22

23 A uniformity of approach towards the indigenous populations of many Latin American
24
25 countries continues to be a persistent feature of social and educational policy and to replicate
26
27 social, cultural, political and economic divides through what Quijano (2000) calls the
28
29 coloniality of power. It obscures their diversity as peoples and denies their distinct histories
30
31 and cosmologies as well as the diversity of their age- and gender-related relationships with
32
33 their ancestral territories. Stereotypes about modernity’s impact on indigenous women means
34
35 that they are often seen as more ‘traditional’ than men in contexts where the gradual erosion
36
37 of subsistence hunting and gathering gives men a more dominant role in economic activities
38
39 and commerce. Changing gender hierarchies can mean that women often have less
40
41 experience of urban types of work and less dominant economic positions within the
42
43 community (Wade 2010). IWGIA (1999) notes that relationships between indigenous men
44
45 and women have often been viewed from the outside as embedded in customary ways of
46
47 living and as pertaining to their culture, leaving issues of violence and gendered abuse
48
49 unchallenged. While many of these dynamics are part of indigenous women’s experiences, to
50
51 treat them as universal or inevitable is to deny indigenous women’s own perspectives, as well
52
53 as their aspirations, agency and struggle.
54
55
56
57
58
59
60
61
62
63
64
65

1
2
3 The representation of all indigenous women as similarly poor, under- or un-educated and/or
4 illiterate ignores, for example, the diversity of their economic situations be these urban or rural.
5
6
7
8 Many indigenous women have incomplete or no formal education, while others, albeit a
9
10 minority, have university degrees and diverse professional qualifications and careers.

59
60
61
62
63
64
65

Missionary and government education policies through much of the 20th century were oriented to educating indigenous populations out of their ‘backwardness’ and integrate or otherwise assimilate them into modern society through formal schooling. Today there is recognition that indigenous peoples have been historically underserved by education systems in terms of access to formal education and that current persistent educational gaps and inequalities are related to broader economic, cultural, social and political inequalities. There are calls for more effective strategies and programmes in order to meet the needs of disadvantaged young people and adults in today’s fast changing world (UNESCO/OREALC 2014, 2017). The solution to high drop-out rates for the poorest young people and those living in rural areas has been to expand primary and secondary schooling in indigenous areas but there has also been a questioning of the nature of curricula and pedagogies which bear little relationship with the kinds of lives and challenges that indigenous students face (Cueto et al. 2009). Critique of the content and orientation of schooling led to the emergence of intercultural bilingual education, which has been actively pursued in the region for over 20 years by indigenous organisations, UNESCO agencies and international and national NGOs. Today most governments have intercultural bilingual departments or offices within their Ministries of Education and have been enacting laws recognising their societies as intercultural and multilingual (see e.g. Lopez 2008). However, expectations for intercultural bilingual education are often very ambitious, including extolling its potential for ‘overcoming poverty, social inequalities, exclusion and the lack of social

1
2 integration' (Defensoria del Pueblo 2011, p.9). What happens in the name of 'intercultural
3 bilingual education' is diverse and often contested (Lopez and Sichra 2016).
4
5
6

7
8 Beyond the focus on primary and secondary schooling for indigenous children Schmelkes
9 (2011) notes that campaigns and plans for intercultural education for adults seem to have
10 evaporated and there has been little progress in developing intercultural adult education. The
11 2005 Peruvian Intercultural Bilingual Education Law (No. 27818) legislates for intercultural
12 bilingual education for adults and literacy but there is little evidence of this happening. So,
13
14 while the educational practice lags behind and is extremely challenging, the global and
15 regional policy discourses for adult education call for new kinds of recognition. The
16 CONFINTEA V and CONFINTEA VI ^{iv} reports refer to 'respecting different cultural groups'
17 beliefs, practices and ways of knowing and learning as a condition for relevant and quality
18 education' (Schmelkes 2011, p.93). The UNESCO/OREALC (2017) document entitled
19 'Indigenous Knowledge and Practices in Education in Latin America' calls for 'the
20 recognition and legitimation of indigenous culture and knowledge, and their inclusion in
21 public policy' (2017, p.5). Indeed, it goes further and demands 'cognitive and epistemic
22 justice' (p.5), that is the transformation of relations of power in the construction of
23 knowledge and the acceptance of marginalised and excluded knowledge (Rodriguez et al.
24 2016).

2 for recognition and rights as women, as indigenous women and an indigenous people? The
3 next three sections consider types of learning that are meaningful for Harakmbut women in
4 their changing lives.
5
6
7
8
9

10 **Harakmbut ways of learning and knowing: life, territory and the spirit world**

11
12
13
14
15

16 Tabet is an indigenous Harakmbut-speaking woman, today in her late 70s. In her early
17
18 years she lived with her family and kin in their communal longhouse in their ancestral forest
19
20 territory in the headwaters of the Madre de Dios river. Their way of life centred around
21
22 fishing, hunting and small-scale swidden agriculture. But as a young girl in the early 1960s
23
24 her people were forced to flee to a Dominican mission to seek relief from infections and
25
26 fevers contracted through incursions into their territory by explorers, lumberers and game
27
28 hunters. Illnesses that were new to the Harakmbut, such as yellow fever, measles and
29
30 influenza, were decimating the population. At school in the mission she learned that her way
31
32 of life, beliefs and values were ‘uncivilised’ and should be cast aside to make way for
33
34 Christian beliefs and an Iberian missionary concept of what a good and dutiful woman should
35
36 be and do (Junquera 1978). Tije (1995) writes that this schooling devalued their culture,
37
38 changed their ways of eating and dressing, their economic activities and also their language.
39
40 ‘In all this process they showed us that learning Spanish was more important than our own
41
42 language’ (Tije 1995, p4). Being confined within the mission led to continuing deaths and
43
44 sickness and tensions between different Harakmbut clans and kin groups. As game became
45
46 scarcer for hunting and accusations of witchcraft abounded, Tabet and her kin group
47
48 decided to leave. They left at night, silently, and travelled upriver by canoe to where they
49
50 established the community of San Jose de Karene and regained their autonomy. By the 1970s
51
52
53
54
55
56
57
58
59
60
61

65

1 the Peruvian government had officially recognised the community and provided collective
2 legal title to a defined and delimited territory, situated within the much wider rainforest lands
3
4
5 of their ancestors.
6
7
8
9

10
11 Tabet arrived in San Jose de Karene as a young mother positioned within a strong extended
12 family. There she was able to build on her knowledge and learning through practical
13
14 experience, through listening and watching her elders, both men and women, through
15
16 learning about the significance and meaning of myths and stories, and also through
17
18 communicating with the spirits through dreaming and chants. She continued to expand her
19
20 knowledge of the forest and river and her skills in agriculture. To be the successful gardener
21
22 that she became and to provide for her growing family meant learning about the forest and
23
24 the creatures that inhabit it and learning how to develop relationships with the spirits of the
25
26 forest and river so that they would guide her gardening and keep her and her family safe
27
28
29
30
31 (Aikman 1999a).
32
33
34
35
36
37

38 For the Harakmbut, the world is unpredictable and inhabited by invisible spirits which
39
40 influence health and wellbeing. Women and men learn to communicate with the spirits to
41
42 help maintain the health of the family members and the community. This learning is lifelong
43
44 and knowledge accumulates with experience, allowing men and women to develop distinct
45
46 and specialised vocabularies to communicate with the spirits of the forest (Aikman 1999a,
47
48 Gray 1997a, b). Over the decades I have known Tabet she has developed the knowledge
49
50 and skills to cultivate several gardens with a diversity of crops and use her knowledge to
51
52 ensure her family's physical and spiritual health as well as forge strong reciprocal
53
54 relationships with her kin and clan. She is recognised within her community as a woman of
55
56
57 status and wisdom. Tabet is also a teacher, encouraging her daughters as they learn through
58
59
60
61
62
63
64
65

1 their joint activities and expand their knowledge, understanding and wisdom through its
2 application. Learning and gaining knowledge that is constituted in the setting of everyday life
3
4
5 - 'knowledge-in-practice' (Lave 1988) - is based on values of trust and respect for the
6
7 teacher, the meaningfulness of the skill and knowledge itself and through the patience of the
8
9 learners as active seekers and users of knowledge (McCarty et al. 1991, see also Aikman
10
11
12 1999a).

13
14
15
16
17 Through Tabet's early life and adulthood she grew in stature, learning from and through her
18
19 participation and experience in activities of cultivating her own gardens, becoming skilled in
20
21
22 biodiversity-management, acquiring an extensive knowledge of different varieties of crops,
23
24 their properties and optimum conditions for their cultivation and accumulating extensive
25
26 ethnobotanical wisdom. While her daughters could list seven different types of pineapple
27
28 grown in her mother's garden, Tabet herself could name 17 randomly intermixed varieties
29
30 growing in one of her gardens which was situated on high ground suited to pineapple
31
32 cultivation. Her knowledge of how to garden, how to fish in the rivers and gather in the forest
33
34 had developed through dreaming and forming relationships with the spirits of the invisible
35
36 world. From the myth and story-telling of the elders she learned about Harakmbut relations
37
38 with the spirits of the forest and the gardens, and learned about the behaviour of animals,
39
40
41 birds and fish.

42
43
44
45
46
47
48 For Tabet using her learning for the benefit of her family and community gained her
49
50
51 recognition as an able gardener with great knowledge of the forest and river, as a woman of
52
53
54 wisdom and understanding of the interplay between the visible world of the Harakmbut and
55
56 the invisible world of the spirits and as someone who uses this knowledge to try to keep her
57
58
59
60
61
62
63
64
65

1 family safe. She is respected for these qualities and over her adult life gained status,
2 recognition and influence within her family and community.
3
4
5

6 **Learning through experience in an encroaching and expanding capitalist society** 7

8
9
10
11 The 1980s and 1990s were a time when the Harakmbut experienced gradual but profound
12 change in their lives. Alongside their gardening, fishing and gathering women also took part
13 with the men in panning for gold during the dry season in the sediment of the rivers. As the
14 price of gold soared nationally and internationally, the number of seasonal migrant gold
15 panners arriving in the Karene river multiplied and tensions increased over their incursions
16 onto San Jose titled land. Over time game became scarcer as squalid settler gold camps lined
17 the river banks and penetrated deep inland where over time semi-permanent settlements
18 transformed into sprawling informal townships^v. Well-organised and powerful gold bosses
19 and gang masters expanded their enterprises using increasingly larger and more highly
20 mechanised machinery to extract the gold bearing soil and sediment, dredging the river beds
21 and excavating the forest all year round.

37
38
39
40
41 The impact of the burgeoning migrant population's ecologically destructive economic
42 practices had subtle but pervasive effects on Harakmbut women's ability to use their learning
43 in their daily lives. It also restricted their freedom to move through their territory and access
44 the forest resources. The Harakmbut men began to spend more time on gold work, as their
45 ability to sustain their families through hunting and fishing were compromised by the
46 destruction of the forest cover, pollution of rivers and scarcity of wild pig, tapir, deer and
47 birds. From being one of several different economic family-oriented activities within their
48 subsistence economy, gold mining became a crucial income generating activity dominated by
49
50

54
55
56
57
58
59
60
61
62
63
64
65

1 the men who for the most part controlled the money. This in turn had an impact on internal
2 social and gendered relations. Senior women such as Tambet gradually stopped growing
3
4
5 surpluses of manioc for beer making as men could directly purchase bottled beer available in
6
7 the shanty gold mining settlements along the rivers (Aikman 1999b, c). Men no longer had
8
9 time to help the women clear the forest for new gardens to plant manioc and plantains, while
10
11 migrant labourers working together with the Harakmbut in gold mining would not eat
12
13 Tambet's garden produce demanding instead bought foodstuffs, such as potatoes, rice and
14
15
16
17 pasta.

18
19
20
21
22 So Tambet learned that wider changes were influencing her ability to use her knowledge and
23
24 complex understandings of the physical and spiritual environment for the good of her family.
25
26 Gold mining and the ability to obtain a fair rate for gold at the trading post had taken on a
27
28 new importance. On trips to the trading post to sell gold and buy foodstuffs, she experienced
29
30 discrimination and humiliation and learned that her way of speaking Spanish marked her out
31
32 as a '*nativo*'. She and her family were viewed with suspicion and in some instances with fear
33
34 by migrants with ingrained prejudices about the indigenous peoples of the rainforest. She
35
36
37 learned through repeated invasions of the community's legal territory by miners, the plunder
38
39 of hardwoods and forest fruits and other infringements of their freedoms that their rights went
40
41 unheeded by the Departmental authorities, the police and the judiciary. On the contrary she
42
43 was discriminated against on the basis of her race, ethnicity and gender. After some years
44
45 she rarely went to the trading post with the men and kept to the community.
46
47
48
49
50
51

52
53 As Tambet's daughters grew, they too learned through gardening, collecting and fishing
54
55 together with their mother and aunts. Harakmbut knowledge is oral and belongs to an
56
57 individual as the culmination of a lifetime of learning. While Tambet's daughters learned
58
59
60
61
62
63
64
65

1
2 much about their cosmology, the spirit world, how to provide for a family and live a rich and
3 valued life in the forest environment, the forest environment itself was changing through the
4 activities of gold mining. Tambet passed on her learning as well as she could to her daughters
5 who were also learning through schooling and close interaction with migrant gold miners
6 now living in and around the community. Travelling salesmen and saleswomen brought their
7 wares - beer, clothes, mobile video screenings of Tarzan and other adventure films which
8 caused much mirth in San Jose - laboriously upriver by canoe to the community. Meanwhile,
9 Puerto Maldonado, the Departmental capital, was slowly transformed from frontier outpost to
10 regional hub, thanks to the burgeoning gold economy, commercial agriculture and forestry.
11
12 State institutions became established, the banking sector expanded and communications with
13 Lima were regularised.

33 Since her brief attendance in the mission school in the 1960s, Tambet had no access to any
34 educational opportunities offered by the state or the missionaries. This is not to say that she
35 did not value schooling for her children. As mining took a hold over the subsistence activities
36 and hunting and fishing no longer provided the basis of the economy, she hoped that school
37 certificates would provide her daughters with alternatives to heavy work involved in gold
38 mining, cooking in gold camps or, worse still, prostitution. Tambet's daughters attended the
39 Dominican mission-run primary school in San Jose. The school, first set up in the early
40 1980s, is staffed by Spanish speaking lay-missionaries and follows the national curriculum.
41
42 The demands of schooling five days a week meant that they had less time to accompany their
43 mother and to learn from and with her about the intimate spiritual links between crops, how
44 they grow and the nutritional and wellbeing of the family and community. At the same time,
45 they had less inclination and motivation to do so as they saw their mother toil in their
46 gardens, struggling to bring home enough fish from the contaminated rivers to feed the

Schooling for Tambet's children was focused on learning to be Peruvian citizens through curriculum and educational practice that was ignorant of Harakmbut knowledge, learning and teaching (Aikman 1999b). Schooling was, as Corbett (2007) writing about Canada aptly puts it, about learning to leave, to leave behind Harambut values and knowledge and to look for new kinds of lives elsewhere. On completing primary schooling, Tambet's daughters boarded in a nunnery in the regional capital in order to attend secondary school.

In their daily lives, Tambet and her children learned that social institutions and individual Peruvians of diverse backgrounds held deep-seated prejudices against them. They learned this in multiple contexts and reinforcing ways: from their struggle to mine for gold legally according to ever changing laws and regulations; their attempts to eke out a subsistence through fishing, agriculture or hunting in their territory that had been illegally invaded and occupied; their interactions with miners, commercial travellers, bureaucrats, representatives of the police, judiciary and the law; the proselytising strategies of the Dominican missionaries and through the education system and its national curriculum. In this environment Tambet learned the importance of finding ways to continue to keep her family safe through her skills of gardening, fishing and gathering, her knowledge of Harakmbut ancestral territory and her relationship with the spirits of the invisible world.

For her daughters growing up in a changing environment, being schooled in Spanish, mobile, smart at business negotiations, able to engage with and use the diverse discourses of miners, officials and non-indigenous people were important aims and valued for alternatives to the potential penury that gold mining and the destruction of the physical environment presaged

(Aikman 2001). They used their learning, their knowledge and skills to seek out new ways to lead their lives and assert themselves as indigenous women and as Peruvians in the midst of rapid social change and an abrasive intercultural environment. They valued the opportunities that schooling afforded them in terms of encounters and relationships with individuals from diverse indigenous and non-indigenous backgrounds, learning a good level of Spanish from the lay-missionary teachers and acquiring academic qualifications on a par with other Peruvians. While some young women of this generation have taken up opportunities to train as health workers, teachers or forestry technicians, others have become involved in the emerging movement for the recognition of indigenous rights, finding new ways to challenge stereotypes and assert themselves as indigenous peoples and as indigenous women.

Learning through training and capacity building for indigenous participation, voice and rights-based advocacy.

In 1982 the Harakmbut, together with 46 indigenous communities from the 17 indigenous peoples of SE Peruvian Amazon, established the Federation of Native of Madre de Dios (FENAMAD) (www.FEMAMAD.org). It was set up to defend indigenous territories from invasion and destruction and to sustain the ways of life embedded in these territories. Its mandate included a search for alternatives to gold mining in order to secure the futures of the indigenous communities. As with other indigenous organisations emerging in the 1980s and 1990s (Deten 1990), men were most active and held leadership positions. Over time, however, the women began to engage more actively within FENAMAD and pushed for the establishment of a Secretary for Women's Issues where they could be represented and their voices heard. In 1990 women representatives from the Harakmbut and other neighbouring

1 indigenous communities held the First Meeting of Native Women of Madre de Dios,
2 organised with the express aim of uniting as indigenous women. Travelling for several days
3
4 by canoe and lorry, they congregated in one community to discuss their status and
5
6 representation in the organisational structures of their communities and how they felt their
7
8 positions as women in these structures was being devalued. They gave voice to their
9
10 anxieties about changes emanating from beyond their communities, stating that
11
12
13

14
15 In recent decades we have suffered from alienation because of contact with western
16
17 society and the introduction of ideas, values, which have brought with them an
18
19 alteration in our ways of being and thinking as well as that of all our cultures of origin
20
21
22 (FENAMAD 1990, p.1).
23
24
25
26
27
28

29 Using Spanish as their common language, the Harakmbut women learned that they could
30
31 work together with other Amazonian indigenous women, could voice their opinions, develop
32
33 their analyses and shape their own development. They felt they had been ‘poorly advised by
34
35 the colonists and because of this we have come to view our traditions as something outdated
36
37 and of little importance today’ (FENAMAD 1990, p.1). They felt marginalised because:
38
39
40 ‘We know little about the importance of revaluing and recognising the worth of our culture,
41
42 customs and values’ (ibid). They also voiced concern for their low level of inclusion in
43
44
45 community decision-making and voiced their desire to more active in the welfare of their
46
47 communities.
48

49
50
51
52
53
54 With a growing determination, they discussed the importance of the family as a locus for
55
56 children’s learning and looked for new ways to reassert their indigenous knowledges and
57
58 practices. They began with sharing their own knowledge of medicinal plants and crops and
59
60
61
62
63
64
65

1 also looked to indigenous health promoters from other regions of the Peruvian Amazon to
2 expand their skills and knowledge in areas of childbirth, hygiene and nutrition. They agreed
3 that schooling had not equipped them with the resources needed to negotiate their futures in
4 the harsh and brutal environment of gold panning, timber extraction and oil exploration. And
5 there was an absence of adult basic education or non-formal programmes in their
6 communities. They wanted learning that would help them secure their rights vis-à-vis the
7 burgeoning migrant population, the state and international businesses and organisations
8 (FENAMAD 1995).
9
10
11
12
13

17
18
19
20
21
22

23 The women voiced concern that the schooling provided in indigenous communities was
24 irrelevant not only for indigenous children's functioning in wider Peruvian society but also
25 for their relationship with their own society. A study carried out for indigenous organisations
26 in Peruvian Amazon at this time concluded that schooling was contributing to the loss of
27 indigenous cultural knowledge and languages and that indigenous children's performance in
28 locally administered tests was 'disastrous' (Chirif 1991, p.61). As schooled women
29 themselves they valued bilingual education but noted that that even when bilingual teachers
30 were posted to indigenous schools, they were not necessarily bilingual in the children's
31 indigenous language. The lay-missionary school teacher in the Dominican-run school in San
32 Jose in the 1990s claimed to be a bilingual teacher because he spoke Quechua and Spanish,
33 but he had no knowledge of Harakmbut. They used their insights to demand better
34 coordination with the Departmental Office of Education and for appropriately qualified
35 indigenous teachers who were alert and sensitive to young peoples' learning and knowledge
36 of their indigenous heritage, experienced in the way of life in this gold mining frontier
37 environment and also knowledgeable about their country as citizens.

1
2
3 By sharing their experiences of the changes that were taking place in their lives and the lives
4 of their families and community the Harakmbut women found common cause with other
5 indigenous women. Together they learned from each other, shared, taught and organised
6 themselves. On the one hand, they learned how to revalue the ways of learning and knowing
7 about Harakmbut land, life and the spirit world they had acquired from their mothers'
8 generation, Tambet's generation. On the other hand, like other indigenous women in Peru
9 they 'learned that it is not a natural condition to be discriminated, mistreated or
10 disadvantaged' (Tarcila Rivera, Quechua indigenous leader, Rivera 2000, p.36). They learned
11 a language of critique and rights and identified abilities and skills they required for effective
12 collective action through training workshops, capacity building and regular meetings to
13 search together for solutions to their collective problems and challenges as indigenous
14 women (FENAMAD 1995).

36 While Harakmbut women were strengthening their presence within FENAMAD and raising
37 pressing issues related to the condition of indigenous women, access to land and resources,
38 violence and marginalisation in their daily lives, they also forged alliances with indigenous
39 women from across the Peruvian Amazon region. FENAMAD is an affiliate of AIDSESEP
40 (the Interethnic Association for the Development of the Peruvian Amazon) an indigenous
41 organisation influential on the national and international stage lobbying for indigenous rights,
42 legal titling on indigenous lands, health and education. In the run up to the 1995 Fourth
43 World Conference on the Status of Women held in Beijing indigenous women established an
44 AIDSESEP Office of Women's Affairs to provide them with a platform within the women's
45 movement and enable them to take their demands to global policy arenas (Oliart 2008). The
46
47

1 Office of Women's Affairs initiated a national workshop to support indigenous women from
2 regional organisations such as FENAMAD to articulate their priorities within their
3
4 communities and to deliver leadership training to develop their capacity to organise and
5 actively take part in developing a political agenda (AIDSESEP 2007). So, while engaging in
6
7 the wider women's movement for recognition and rights, they sought to highlight the
8
9 inequalities and discriminations they experienced as *indigenous* women. In 2000 Rivera
10
11 noted:
12
13
14
15

16
17 There has been progress for women in Peru, seeking spaces for participation,
18
19 influencing policy formulation, laws, and seeking alternatives with which to improve
20
21 the conditions of Peruvian women in general but that, in this context indigenous
22
23 women have still not managed to gain recognition or respect with regard to gender,
24
25 ethnicity or culture (Rivera 2000, p.36).
26
27
28
29
30
31
32

33
34 Slowly Harakbmut women and the women of FENAMAD strengthened linkages and
35
36 expanded their networks with indigenous women around the globe. In 2013, the World
37
38 Conference of Indigenous Women, took place in Lima Peru, and the Conference Statement
39
40 'Indigenous Women Towards Visibility and Inclusion' notes: 'We recognise ourselves as
41
42 rights holders and, also at the collective level, we identify specific problems because of our
43
44 condition as women and as members of indigenous peoples' (WCIC 2013, Section 7). This
45
46 Statement calling for the 'development of leadership and continuous training and capacity
47
48 building processes based in principles, values and methodologies that are in accordance with
49
50 our cultural worldview' (ibid) echoes FENAMAD women's demands and has grown out of
51
52 their grounded experiences. Indigenous women's learning through training and capacity
53
54 building has shaped their action as women, as indigenous and as indigenous women. The
55
56
57
58
59
60
61
62
63
64
65

1 International Indigenous Women's Forum at the UN Permanent Forum on Indigenous Issues
2 has a programme for training in rights and other issues identified by indigenous women to
3
4
5 enable a 'breaking with paradigms of victimisation and vulnerability' (p.12). This is training
6
7 to build their capacity as self-determining actors within their dynamic societies today and
8
9 'building on indigenous cosmovisions, spirituality and intergenerational dialogue' (IIFW
10 2009, p.22).

11
12
13 Learning through training and capacity building for indigenous participation, leadership,
14
15 voice and rights-based advocacy is part of a clear and explicit demand of indigenous women
16
17 engaged in action for recognition as self-determining actors. It has been identified by
18
19 indigenous women from FENAMAD to the UN Permanent Forum on Indigenous Issues as
20
21 vital for achieving the kind of recognition they desire in order to shape for themselves the
22
23 kinds of change they value.
24
25
26
27

28 29 30 31 32 33 **Concluding discussion**

34
35
36
37 The previous sections have investigated three different types of learning that Harakmbut
38 women value in different ways. The first - developing knowledge, skills and understandings
39
40 of Harakmbut society, relationships to their territory and spirit world - is discussed through
41
42 the example of Tambet. A glimpse into her young and adult life has offered some insights
43
44 into the value and meaningfulness of this kind of learning for Harakmbut women of her
45
46 generation. Learning emerges from and through the relationships Tambet develops with the
47
48 visible world around her as well as the invisible world of the spirits and link her with her
49
50 predecessors and their collective territory. How she uses her learning and teaches her
51
52 daughters and subsequent generations contributes to her recognition as a strong and respected
53
54 Harakmbut woman. Non-Harakmbut are not interested in this learning and its language and
55
56
57
58
59
60
61
62
63
64
65

are ignorant of the view of the world (the cosmovision) and understandings it encompasses.

Hence Tabet's knowledge and wisdom go unrecognised and unvalued in the turbulent and often violent gold mining society on the fringes of the Peruvian state.

The second type of learning for Harakmbut women is experienced through daily encounters in what was and continues to be an increasingly intercultural environment through the relentless increase in migrants in trying to eke out a livelihood in the gold economy. Tabet and her daughters' experiences offer insights into the complex and abusive relationships that Harakmbut women experience in their encounters with migrants and representatives of state institutions. Their learning happens through unplanned and unanticipated interactions, the cut and thrust of life in the gold economy and through experiences of humiliation and discrimination. But the language skills, social skills, and different bodies of knowledge that Harakmbut women learn are important for their navigation and survival in this changing social and physical environment. Schooling became a regular feature of Tabet's daughters' childhood and youth and there they gained schooled knowledge, albeit disconnected from the lives they were living. They also gained certificates and qualifications which brought a certain status as 'educated' Peruvians, despite its potential to alienate them from the values and knowledge they learn from their mother.

The third type of learning emerged in context of expansion of the gold economy, the lack of regulation and the need to act in the face of marginalisation and structurally embedded inequalities. The first steps taken by Harakmbut women to organise themselves through FENAMAD illustrates two aspects to this learning. On the one hand, Tabet's daughters' generation began to question their internalisation of their supposed inferiority and their prejudicial stereotyping as ignorant, vulnerable and powerless. They began to reassess and

1 revalue the knowledge and skills which they learn from their mothers and came together as
2 women to challenge the dominance of men in decision-making in their own families and
3
4 communities. Drawing strength from the growing women's movements in Peru and Latin
5 America they joined in the call for women's equality but defining and engaging on their own
6
7 terms to dismantle homogenising and discriminatory conceptions of who indigenous women
8
9 are (Duarte 2012). In her 2008 article, Oliart traces the nature and trajectory of indigenous
10
11 women's resistance in Andean Peru. She refers to the diversity of indigenous women's
12
13 agency and actions and their positionality and histories throughout Latin America to note that
14
15 indigenous women respond to the challenges they face and the opportunities they have on
16
17 their own terms and in their own ways.

27 Looking back over the past 40 years, as this article has done, it is clear that not all Harakmbut
28
29 women have had the same challenges and opportunities in their lives. Harakmbut women
30
31 have tread different paths at different times and made different decisions about their learning
32
33 and the knowledge and skills they value. Tambet has not been active in formal campaigning
34
35 for indigenous rights and indigenous women's rights – and nor have all her daughters or
36
37 those of her daughters' generation – but she supports the aims and work of FENAMAD and
38
39 supports the younger women who do. She has continued to live and work in San Jose, while
40
41 the gold mining economy has expanded around her, destroying huge tracts of forest cover and
42
43 polluting the rivers. Her three daughters left the community to attend missionary secondary
44
45 schooling. While one returned, two continued on to further education and were posted to
46
47 positions as health worker and teacher respectively far from San Jose. Nevertheless, they are
48
49 engaged in different ways with the work and campaigning of FENAMAD. The daughter who
50
51 returned has worked in the gold economy, cooking for groups of miners and working with her
52
53 mother in their gardens. Her children are growing up alongside children of mixed

Harakmbut-non-indigenous marriages and non-indigenous children of the contract miners.

Tambet's grandchildren have only a rudimentary ability in the Harakmbut language and their knowledge of Harakmbut territory, rivers and forest is dominated by the destructive effects of gold mining. They attend the community school which is still run by Dominican lay-missionaries and still offers only a monolingual Spanish national curriculum. The dominant language heard in the community today is the language of the gold economy.

Tambet has learned how to fish and garden and sustain her family in a changed physical and social environment. She has learned how to interact with miners living in her community and her house and how to maintain her distance and dignity. Her knowledge and relationship with the forest and river, despite their erosion, has continued to give meaning to her life as an Harakmbut woman. She maintains her self-respect through relationships with the spirits of the forest and rivers of her ancestral territory inhabiting remote areas still untouched by gold mining. While her daughters' lives are being played out in a different social and physical environment the knowledge passed on from their mother and her generation grounds them as Harakmbut. The women who began to speak out in FENAMAD have developed a new awareness of the worth of their culture, language and way of life. It is this knowledge of their indigenous cosmologies, histories and their Harakmbut ways of learning that gives meaning to their struggle and their search for new skills in leadership, negotiation and advocacy. Indigenous women are bound together at national and international levels by the knowledges, skills and understandings of their indigenous world views, relationships to their respective territories and spirituality.

Harakmbut society and culture has changed since Tambet was a young woman and mother, a society and culture that has always been dynamic and changing. But the shifts over recent

1 decades have been swift and profound. A younger generation now uses the skills and
2 knowledge they have gained of contemporary Peruvian society to set out demands and
3 strategies for the recognition and benefit of their families, communities and people. And they
4 are doing this having re-valued the learning and knowledge they acquired from their mothers
5 and grandmothers and by shaping it for the lives they lead today. All three types of learning
6 are interdependent and integral to achieving individual and collective recognition as
7 Harakmbut women. It is their ongoing learning that helps them continue to reshape their
8 indigenous ways of life, their relationship to their history and their Harakmbut view of the
9 world in ways that are meaningful. From the outside and at a quick glance, it would be easy
10 to categorise Tambet and her daughters as poor, disempowered and vulnerable. But that
11 would be to deny their agency, dignity and recognition.

ⁱ Tambet is a pseudonym. I have changed some of the details of ‘Tambet’s life and situation to ensure her anonymity.

ⁱⁱ I write as a non-indigenous academic – I am not writing on behalf of Tambet or Harakmbut women – but offer my analysis from the privileged insights I have gained through sharing in the lives of these women (see for example the work of Smith 2008, 2016 on decolonising methodologies).

ⁱⁱⁱ The miners who have settled in Madre de Dios are diverse ethnically, economically, in terms of their provenance, the kind and scale of the mining they carry out, their relationship to the environment, and their aims and their relationships with the Harakmbut. For more details see for example Aikman 1999c, 2012.

^{iv} CONFINTEA, the UNESCO International Conference on Adult Education is held every 12 years. CONFINTEA V was held in 1997 and CONFINTEA VI was held in 2009 in Belem, Brazil (see Morrison and Vaiutoletti 2011 for more detail about the discussions of indigenous peoples at these conferences).

^v The growth of gold mining over this period is documented in Gray 1986.
