## SPSS logistic regression results

### Variable labels

Kescat15 – Kessler dichotomised for selecting cases for analysis (1=high distress)

Kescat16 – Kessler dichotomised as outcome (1=high distress)

Phycat15 – Physical health dichotomised for selecting cases for analysis (1=poor physical health)

Phycat16 – Physical health dichotomised as outcome (1=poor physical health)

Physical\_health - 2105 physical health, continuous variable

Kess\_t15 – 2015 Kessler score, continuous variable

choice\_freq – job control

bullying\_freq - bullying

time\_pressure\_freq – time pressure

duties\_freq – role clarity

FAC1\_1 – first principal component of health and wellbeing practices

Facsq –  $FAC1_1 * FAC1_1$

\* Encoding: UTF-8.

```
COMPUTE facsq = FAC1_1 * FAC1_1.
```

```
USE ALL.
```

```
COMPUTE filter_$(kescat15 = 0).
```

```
VARIABLE LABELS filter_$ 'kescat15 = 0 (FILTER)'.  
VALUE LABELS filter_$ 0 'Not Selected' 1 'Selected'.  
FORMATS filter_$ (f1.0).  
FILTER BY filter_$.
```

```
EXECUTE.
```

```
correlations /variables = kescat16 kescat15 fac1_1.
```

## Correlations

### Warnings

glm: One or more records are not used in the analysis because they have one or more fields with invalid or missing values.

glm: Valid values for events (target) and trials variables are non-negative and positive integers respectively, and the number of trials cannot be less than the number of events.

### Case Processing Summary

	N	Percent
Included	5339	91.2%

Excluded	516	8.8%
Total	5855	100.0%

### Model Summary

Target	Kessler16 > 1 = 1	
Probability Distribution	Binomial	
Link Function	Logit	
Information Criterion	Akaike Corrected	29410.821
	Bayesian	29417.402

Information criteria are based on the -2 log likelihood (29408.821) and are used to compare models. Models with smaller information criterion values fit better.

### Warnings

glm: One or more records are not used in the analysis because they have one or more fields with invalid or missing values.

glm: Valid values for events (target) and trials variables are non-negative and positive integers respectively, and the number of trials cannot be less than the number of events.

glm: The final Hessian matrix is not positive definite although all convergence criteria are satisfied. The procedure continues despite this warning. Subsequent results produced are based on the last iteration. Validity of the model fit is uncertain.

### Case Processing Summary

	N	Percent
Included	5339	91.2%
Excluded	516	8.8%
Total	5855	100.0%

### Model Summary

Target	Kessler16 > 1 = 1	
Probability Distribution	Binomial	
Link Function	Logit	
Information Criterion	Akaike Corrected	27761.298
	Bayesian	27767.878

Information criteria are based on the -2 log likelihood (27759.297) and are used to compare models. Models with smaller information criterion values fit better.

### Warnings

glm: One or more records are not used in the analysis because they have one or more fields with invalid or missing values.

glm: Valid values for events (target) and trials variables are non-negative and positive integers respectively, and the number of trials cannot be less than the number of events.

### Case Processing Summary

	N	Percent
Included	5339	91.2%
Excluded	516	8.8%
Total	5855	100.0%

### Model Summary

Target	Kessler16 > 1 = 1	
Probability Distribution	Binomial	
Link Function	Logit	
Information Criterion	Akaike Corrected	29431.948
	Bayesian	29438.528

Information criteria are based on the -2 log likelihood (29429.948) and are used to compare models. Models with smaller information criterion values fit better.

### Warnings

glmm: One or more records are not used in the analysis because they have one or more fields with invalid or missing values.

glmm: Valid values for events (target) and trials variables are non-negative and positive integers respectively, and the number of trials cannot be less than the number of events.

glmm: The estimated covariance matrix of the random effects (the G matrix) is not positive definite. The procedure continues despite this warning. Subsequent results produced are based on the last iteration. Validity of the model fit is uncertain.

glmm: The final Hessian matrix is not positive definite although all convergence criteria are satisfied. The procedure continues despite this warning. Subsequent results produced are based on the last iteration. Validity of the model fit is uncertain.

### Case Processing Summary

	N	Percent
Included	1100	98.8%
Excluded	13	1.2%
Total	1113	100.0%

### Model Summary

Target	Kessler16 > 1 = 1	
Probability Distribution	Binomial	
Link Function	Logit	
Information Criterion	Akaike Corrected	4993.082
	Bayesian	4998.074

Information criteria are based on the -2 log likelihood (4991.079) and are used to compare models. Models with smaller information criterion values fit better.

### Warnings

glm: One or more records are not used in the analysis because they have one or more fields with invalid or missing values.

glm: Valid values for events (target) and trials variables are non-negative and positive integers respectively, and the number of trials cannot be less than the number of events.

glm: The estimated covariance matrix of the random effects (the G matrix) is not positive definite. The procedure continues despite this warning. Subsequent results produced are based on the last iteration. Validity of the model fit is uncertain.

glm: The final Hessian matrix is not positive definite although all convergence criteria are satisfied. The procedure continues despite this warning. Subsequent results produced are based on the last iteration. Validity of the model fit is uncertain.

### Case Processing Summary

	N	Percent
Included	1100	98.8%
Excluded	13	1.2%
Total	1113	100.0%

### Model Summary

Target	Kessler16 > 1 = 1	
Probability Distribution	Binomial	
Link Function	Logit	
Information Criterion	Akaike Corrected	5003.905
	Bayesian	5008.895

Information criteria are based on the -2 log likelihood (5001.901) and are used to compare models. Models with smaller information criterion values fit better.

### Warnings

glmm: One or more records are not used in the analysis because they have one or more fields with invalid or missing values.

glmm: Valid values for events (target) and trials variables are non-negative and positive integers respectively, and the number of trials cannot be less than the number of events.

glmm: The estimated covariance matrix of the random effects (the G matrix) is not positive definite. The procedure continues despite this warning. Subsequent results produced are based on the last iteration. Validity of the model fit is uncertain.

glmm: The final Hessian matrix is not positive definite although all convergence criteria are satisfied. The procedure continues despite this warning. Subsequent results produced are based on the last iteration. Validity of the model fit is uncertain.

### Case Processing Summary

	N	Percent
Included	1100	98.8%
Excluded	13	1.2%
Total	1113	100.0%

### Model Summary

Target	Kessler16 > 1 = 1	
Probability Distribution	Binomial	
Link Function	Logit	
Information Criterion	Akaike Corrected	5013.818
	Bayesian	5018.808

Information criteria are based on the -2 log likelihood (5011.814) and are used to compare models. Models with smaller information criterion values fit better.

**Random Effect Covariances**

### Random Effect Block 1

Random Effect Block	Intercept
Intercept	.000

Covariance Structure: Variance

components

Subject Specification: companyld15

### Covariance Parameters

#### Covariance Parameters Summary

Covariance Parameters	Residual Effect	0
	Random Effects	1
Design Matrix Columns	Fixed Effects	10
	Random Effects	1 <sup>a</sup>
Common Subjects		58

Common subjects are based on the subject specifications for the residual and random effects and are used to chunk the data for better performance.

a. This is the number of columns per common subject.

### Residual Effect

Residual Effect	Estimate	Std. Error	Z	Sig.	95% Confidence Interval	
					Lower	Upper
Variance	1.000	.	.	.	.	.

Covariance Structure: Scaled Identity

Subject Specification: (None)

### Random Effect

Random Effect Covariance	Estimate	Std. Error	Z	Sig.	95% Confidence Interval	
					Lower	Upper
Var(Intercept)	.000 <sup>a</sup>	.	.	.	.	.

Covariance Structure: Variance components

Subject Specification: companyId15

a. This parameter is redundant.

### Warnings

glmm: One or more records are not used in the analysis because they have one or more fields with invalid or missing values.

glmm: Valid values for events (target) and trials variables are non-negative and positive integers respectively, and the number of trials cannot be less than the number of events.

glmm: The estimated covariance matrix of the random effects (the G matrix) is not positive definite. The procedure continues despite this warning. Subsequent results produced are based on the last iteration. Validity of the model fit is uncertain.

glmm: The final Hessian matrix is not positive definite although all convergence criteria are satisfied. The procedure continues despite this warning. Subsequent results produced are based on the last iteration. Validity of the model fit is uncertain.

### Case Processing Summary

	N	Percent
Included	1100	98.8%
Excluded	13	1.2%
Total	1113	100.0%

### Model Summary

Target	Kessler16 > 1 = 1	
Probability Distribution	Binomial	
Link Function	Logit	
Information Criterion	Akaike Corrected	5003.543
	Bayesian	5008.533

Information criteria are based on the -2 log likelihood (5001.539) and are used to compare models. Models with smaller information criterion values fit better.

**Random Effect Covariances**

### Random Effect Block 1

Random Effect Block	Intercept
Intercept	.000

Covariance Structure: Variance

components

Subject Specification: companyId15

### Covariance Parameters

#### Covariance Parameters Summary

Covariance Parameters	Residual Effect	0
	Random Effects	1
Design Matrix Columns	Fixed Effects	10
	Random Effects	1 <sup>a</sup>
Common Subjects		58

Common subjects are based on the subject specifications for the residual and random effects and are used to chunk the data for better performance.

a. This is the number of columns per common subject.

### Residual Effect

Residual Effect	Estimate	Std. Error	Z	Sig.	95% Confidence Interval	
					Lower	Upper
Variance	1.000	.	.	.	.	.

Covariance Structure: Scaled Identity

Subject Specification: (None)

### Random Effect

Random Effect Covariance	Estimate	Std. Error	Z	Sig.	95% Confidence Interval	
					Lower	Upper
Var(Intercept)	.000 <sup>a</sup>	.	.	.	.	.

Covariance Structure: Variance components

Subject Specification: companyId15

a. This parameter is redundant.

### Warnings

glm: One or more records are not used in the analysis because they have one or more fields with invalid or missing values.

glm: Valid values for events (target) and trials variables are non-negative and positive integers respectively, and the number of trials cannot be less than the number of events.

### Case Processing Summary

	N	Percent
Included	5069	91.4%
Excluded	477	8.6%
Total	5546	100.0%

### Model Summary

Target	Phy16 > 2 = 1	
Probability Distribution	Binomial	
Link Function	Logit	
Information Criterion	Akaike Corrected	28024.204
	Bayesian	28030.732

Information criteria are based on the -2 log likelihood (28022.203) and are used to compare models. Models with smaller information criterion values fit better.

### Warnings

glm: One or more records are not used in the analysis because they have one or more fields with invalid or missing values.

glm: Valid values for events (target) and trials variables are non-negative and positive integers respectively, and the number of trials cannot be less than the number of events.

### Case Processing Summary

	N	Percent
Included	5069	91.4%
Excluded	477	8.6%
Total	5546	100.0%

### Model Summary

Target	Phy16 > 2 = 1	
Probability Distribution	Binomial	
Link Function	Logit	
Information Criterion	Akaike Corrected	28065.210
	Bayesian	28071.739

Information criteria are based on the -2 log likelihood (28063.210) and are used to compare models. Models with smaller information criterion values fit better.

**Random Effect Covariances**

### Random Effect Block 1

Random Effect Block	Intercept
Intercept	.043

Covariance Structure: Variance

components

Subject Specification: companyId15

### Covariance Parameters

#### Covariance Parameters Summary

Covariance Parameters	Residual Effect	0
	Random Effects	1
Design Matrix Columns	Fixed Effects	10
	Random Effects	1 <sup>a</sup>
Common Subjects		58

Common subjects are based on the subject specifications for the residual and random effects and are used to chunk the data for better performance.

a. This is the number of columns per common subject.

### Residual Effect

Residual Effect	Estimate	Std. Error	Z	Sig.	95% Confidence Interval	
					Lower	Upper
Variance	1.000	.	.	.	.	.

Covariance Structure: Scaled Identity

Subject Specification: (None)

### Random Effect

Random Effect Covariance	Estimate	Std. Error	Z	Sig.	95% Confidence Interval	
					Lower	Upper
Var(Intercept)	.043	.036	1.198	.231	.008	.222

Covariance Structure: Variance components

Subject Specification: companyId15

### Random Effects Parameters

### Warnings

glm: One or more records are not used in the analysis because they have one or more fields with invalid or missing values.

glm: Valid values for events (target) and trials variables are non-negative and positive integers respectively, and the number of trials cannot be less than the number of events.

### Case Processing Summary

	N	Percent
Included	5069	91.4%
Excluded	477	8.6%
Total	5546	100.0%

### Model Summary

Target	Phy16 > 2 = 1	
Probability Distribution	Binomial	
Link Function	Logit	
Information Criterion	Akaike Corrected	28026.548
	Bayesian	28033.076

Information criteria are based on the -2 log likelihood (28024.547) and are used to compare models. Models with smaller information criterion values fit better.

Probability Distribution	Binomial
Link Function	Logit
Information Criterion	<u>Akaike Corrected</u> 28030.813
	Bayesian 28037.342

Information criteria are based on the -2 log likelihood (28028.813) and are used to compare models. Models with smaller information criterion values fit better.

### Warnings

glm: One or more records are not used in the analysis because they have one or more fields with invalid or missing values.

glm: Valid values for events (target) and trials variables are non-negative and positive integers respectively, and the number of trials cannot be less than the number of events.

### Case Processing Summary

	N	Percent
Included	5069	91.4%
Excluded	477	8.6%
Total	5546	100.0%

### Model Summary

Target	Phy16 > 2 = 1	
Probability Distribution	Binomial	
Link Function	Logit	
Information Criterion	Akaike Corrected	28029.443
	Bayesian	28035.971

Information criteria are based on the -2 log likelihood (28027.442) and are used to compare models. Models with smaller information criterion values fit better.

### Warnings

glm: One or more records are not used in the analysis because they have one or more fields with invalid or missing values.

glm: Valid values for events (target) and trials variables are non-negative and positive integers respectively, and the number of trials cannot be less than the number of events.

glm: The final Hessian matrix is not positive definite although all convergence criteria are satisfied. The procedure continues despite this warning. Subsequent results produced are based on the last iteration. Validity of the model fit is uncertain.

### Case Processing Summary

	N	Percent
--	---	---------

Included	1370	96.3%
Excluded	52	3.7%
Total	1422	100.0%

### Model Summary

Target	Phy16 > 2 = 1	
Probability Distribution	Binomial	
Link Function	Logit	
Information Criterion	Akaike Corrected	6099.700
	Bayesian	6104.914

Information criteria are based on the -2 log likelihood (6097.697) and are used to compare models. Models with smaller information criterion values fit better.

### Warnings

glm: One or more records are not used in the analysis because they have one or more fields with invalid or missing values.

glm: Valid values for events (target) and trials variables are non-negative and positive integers respectively, and the number of trials cannot be less than the number of events.

glm: The final Hessian matrix is not positive definite although all convergence criteria are satisfied. The procedure continues despite this warning. Subsequent results produced are based on the last iteration. Validity of the model fit is uncertain.

### Case Processing Summary

	N	Percent
Included	1370	96.3%
Excluded	52	3.7%
Total	1422	100.0%

### Model Summary

Target	Phy16 > 2 = 1	
Probability Distribution	Binomial	
Link Function	Logit	
Information Criterion	Akaike Corrected	6102.163
	Bayesian	6107.375

Information criteria are based on the -2 log likelihood (6100.160) and are used to compare models. Models with smaller information criterion values fit better.

### Warnings

glm: One or more records are not used in the analysis because they have one or more fields with invalid or missing values.

glm: Valid values for events (target) and trials variables are non-negative and positive integers respectively, and the number of trials cannot be less than the number of events.

glm: The final Hessian matrix is not positive definite although all convergence criteria are satisfied. The procedure continues despite this warning. Subsequent results produced are based on the last iteration. Validity of the model fit is uncertain.

### Case Processing Summary

	N	Percent
Included	1370	96.3%
Excluded	52	3.7%
Total	1422	100.0%

### Model Summary

Target	Phy16 > 2 = 1	
Probability Distribution	Binomial	
Link Function	Logit	
Information Criterion	Akaike Corrected	6104.947
	Bayesian	6110.160

Information criteria are based on the -2 log likelihood (6102.944) and are used to compare models. Models with smaller information criterion values fit better.

**Random Effect Covariances**

### Random Effect Block 1

Random Effect Block	Intercept
Intercept	.000

Covariance Structure: Variance

components

Subject Specification: companyId15

### Covariance Parameters

#### Covariance Parameters Summary

Covariance Parameters	Residual Effect	0
	Random Effects	1
Design Matrix Columns	Fixed Effects	10
	Random Effects	1 <sup>a</sup>
Common Subjects		57

Common subjects are based on the subject specifications for the residual and random effects and are used to chunk the data for better performance.

a. This is the number of columns per common subject.

### Residual Effect

Residual Effect	Estimate	Std. Error	Z	Sig.	95% Confidence Interval	
					Lower	Upper
Variance	1.000	.	.	.	.	.

Covariance Structure: Scaled Identity

Subject Specification: (None)

### Random Effect

Random Effect Covariance	Estimate	Std. Error	Z	Sig.	95% Confidence Interval	
					Lower	Upper
Var(Intercept)	2.950E-11 <sup>a</sup>	.	.	.	.	.

Covariance Structure: Variance components

Subject Specification: companyId15

a. This parameter is redundant.

### Warnings

glm: One or more records are not used in the analysis because they have one or more fields with invalid or missing values.

glm: Valid values for events (target) and trials variables are non-negative and positive integers respectively, and the number of trials cannot be less than the number of events.

glm: The final Hessian matrix is not positive definite although all convergence criteria are satisfied. The procedure continues despite this warning. Subsequent results produced are based on the last iteration. Validity of the model fit is uncertain.

### Case Processing Summary

	N	Percent
Included	1370	96.3%
Excluded	52	3.7%
Total	1422	100.0%

### Model Summary

Target	Phy16 > 2 = 1	
Probability Distribution	Binomial	
Link Function	Logit	
Information Criterion	Akaike Corrected	6107.889
	Bayesian	6113.101

Information criteria are based on the -2 log likelihood (6105.886) and are used to compare models. Models with smaller information criterion values fit better.

Probability distribution: Binomial

Link function: Logit

a. Target:  $\text{Phy16} > 2 = 1$

**Random Effect Covariances**

### Random Effect Block 1

Random Effect Block	Intercept
Intercept	.000

Covariance Structure: Variance

components

Subject Specification: companyId15

### Covariance Parameters

#### Covariance Parameters Summary

Covariance Parameters	Residual Effect	0
	Random Effects	1
Design Matrix Columns	Fixed Effects	10
	Random Effects	1 <sup>a</sup>
Common Subjects		57

Common subjects are based on the subject specifications for the residual and random effects and are used to chunk the data for better performance.

a. This is the number of columns per common subject.

### Residual Effect

Residual Effect	Estimate	Std. Error	Z	Sig.	95% Confidence Interval	
					Lower	Upper
Variance	1.000	.	.	.	.	.

Covariance Structure: Scaled Identity

Subject Specification: (None)

### Random Effect

Random Effect Covariance	Estimate	Std. Error	Z	Sig.	95% Confidence Interval	
					Lower	Upper
Var(Intercept)	2.927E-11 <sup>a</sup>	.	.	.	.	.

Covariance Structure: Variance components

Subject Specification: companyId15

a. This parameter is redundant.

HLM-7 results

Variable labels

Physical\_health - 2105 physical health, continuous variable

Kess\_t15 – 2015 Kessler score, continuous variable

Choice – job control

Bully - bullying

Time – time pressure

Duties – role clarity

Wellpca – first principal component of health and wellbeing practices

Wellpcas – Wellpca \* Wellpca

These are results for developing low distress in 2016 (i.e. recovery from high distress)

INTRCPT2, $\gamma_{00}$	-2.416440	0.089239	(0.078, 0.103)
WELLPCA, $\gamma_{01}$	-0.186411	0.829933	(0.767, 0.898)
For CHOICE slope, $\beta_1$			
INTRCPT2, $\gamma_{10}$	-0.121816	0.885312	(0.814, 0.962)
For BULLY slope, $\beta_2$			
INTRCPT2, $\gamma_{20}$	0.065026	1.067186	(0.839, 1.358)
For TIME slope, $\beta_3$			
INTRCPT2, $\gamma_{30}$	-0.062211	0.939685	(0.876, 1.008)
For DUTIES slope, $\beta_4$			
INTRCPT2, $\gamma_{40}$	-0.052388	0.948961	(0.864, 1.042)
WELLPCA, $\gamma_{41}$	-0.017049	0.983096	(0.909, 1.063)
For PHYCON15 slope, $\beta_5$			
INTRCPT2, $\gamma_{50}$	1.999649	7.386462	(5.471, 9.973)
For KESCON15 slope, $\beta_6$			
INTRCPT2, $\gamma_{60}$	0.420544	1.522790	(1.346, 1.723)

Final estimation of variance components					
Random Effect	Standard Deviation	Variance Component	df	Chi-square	p
INTRCPT1, $u_0$	0.18465	0.03410	56	67.43242	0.141
DUTIES slope, $u_4$	0.02557	0.00065	56	53.97416	>0.500

Mplus results

Variable labels

Phy15 - 2105 physical health, continuous variable

Kes15 – 2015 Kessler score, continuous variable

Choice15 – job control

Bully15 - bullying

Press15 – time pressure

Duties15 – role clarity

Prafac1 – first principal component of health and wellbeing practices

Prafacsq –  $FAC1\_1 * FAC1\_1$

sizcat – organisational size

finpro – sector - financial and professional services

know – sector - knowledge intensive industries

manu – sector manufacturing

clu1 clu2 clu3 – clusters from latent profile analysis, clu1 is least extensive category, clu2 is most extensive category, clu3 is intermediate category

ACC – single practice, accumulated overtime

ACT – single practice, active governance

EAT – single practice, healthy eating

ALC – single practice, drinking support

PHY – single practice, physical health

PSY – single practice, psychological problems

SMO – single practice, smoking cessation

TER – single practice, medical services

BEN – single practice, provision of health benefits

HPR – single practice, health promotion

SPR – single practice, service promotion

CUL – single practice, management support

FEL – single practice, flexible time

Results are presented in the following order: a) Table 4 from the main text; b) Replications of significant results from the main text using simple models and a maximum likelihood estimator; c) Moderators; c) outcomes as continuous variables; d) using latent profile analysis clusters instead of the first principal component; e) controls for organisational size and sector; f) assessing impact of single practices.

Linear effects only deterioration of physical health in 2016.

These are models with the Kessler score and physical health score in 2016 treated as continuous not dichotomous variables, with 2015 values of Kessler and physical health interacting with health and wellbeing practices (the respective cross-level interactions are represented by the regression of health and wellbeing practices on the random slopes (s1 for 2015 Kessler and s2 for 2015 physical health)).

Physical health model

# PRIORS FOR ALL PARAMETERS

## PRIOR MEAN

## PRIOR VARIANCE

## PRIOR STD. DEV.

Parameter 1~N(0.000,infinity)	0.0000	infinity	infinity
Parameter 2~N(0.000,infinity)	0.0000	infinity	infinity
Parameter 3~N(0.000,infinity)	0.0000	infinity	infinity
Parameter 4~N(0.000,infinity)	0.0000	infinity	infinity
Parameter 5~N(0.000,infinity)	0.0000	infinity	infinity
Parameter 6~N(0.000,5.000)	0.0000	5.0000	2.2361
Parameter 7~N(0.000,5.000)	0.0000	5.0000	2.2361
Parameter 8~N(0.000,5.000)	0.0000	5.0000	2.2361
Parameter 9~N(0.000,5.000)	0.0000	5.0000	2.2361
Parameter 10~N(0.000,5.000)	0.0000	5.0000	2.2361
Parameter 11~IW(1.000,7)	infinity	infinity	infinity
Parameter 12~IW(0.000,7)	infinity	infinity	infinity

Parameter 13~IW(1.000,7)	infinity	infinity	infinity
Parameter 14~IW(0.000,7)	infinity	infinity	infinity
Parameter 15~IW(0.000,7)	infinity	infinity	infinity
Parameter 16~IW(1.000,7)	infinity	infinity	infinity
Parameter 17~IW(0.000,7)	infinity	infinity	infinity
Parameter 18~IW(0.000,7)	infinity	infinity	infinity
Parameter 19~IW(0.000,7)	infinity	infinity	infinity
Parameter 20~IW(1.000,7)	infinity	infinity	infinity
Parameter 21~IW(0.000,7)	infinity	infinity	infinity
Parameter 22~IW(0.000,7)	infinity	infinity	infinity
Parameter 23~IW(0.000,7)	infinity	infinity	infinity
Parameter 24~IW(0.000,7)	infinity	infinity	infinity
Parameter 25~IW(1.000,7)	infinity	infinity	infinity
Parameter 26~IW(0.000,7)	infinity	infinity	infinity
Parameter 27~IW(0.000,7)	infinity	infinity	infinity
Parameter 28~IW(0.000,7)	infinity	infinity	infinity
Parameter 29~IW(0.000,7)	infinity	infinity	infinity
Parameter 30~IW(0.000,7)	infinity	infinity	infinity
Parameter 31~IW(1.000,7)	infinity	infinity	infinity
Parameter 32~N(0.000,infinity)	0.0000	infinity	infinity
Parameter 33~N(0.000,infinity)	0.0000	infinity	infinity
Parameter 34~N(0.000,infinity)	0.0000	infinity	infinity
Parameter 35~N(0.000,infinity)	0.0000	infinity	infinity
Parameter 36~N(0.000,infinity)	0.0000	infinity	infinity
Parameter 37~N(0.000,infinity)	0.0000	infinity	infinity
Parameter 38~N(0.000,5.000)	0.0000	5.0000	2.2361
Parameter 39~N(0.000,5.000)	0.0000	5.0000	2.2361
Parameter 40~N(0.000,5.000)	0.0000	5.0000	2.2361
Parameter 41~IG(-1.000,0.000)	infinity	infinity	infinity
Parameter 42~IG(-1.000,0.000)	infinity	infinity	infinity
Parameter 43~IW(1.000,4)	infinity	infinity	infinity
Parameter 44~IW(0.000,4)	infinity	infinity	infinity
Parameter 45~IW(1.000,4)	infinity	infinity	infinity
Parameter 46~IW(0.000,4)	infinity	infinity	infinity
